Fuel Injection Systems and Parts

Reconditioning of CR-Injector MTU-4000 series

A Greek Power Plant faced a long-term problem of its common rail injection system. Every failure on their injectors was deemed by subcontractors & site managers as irreparable. Wilson & Kyle collected those injectors and forwarded to DUAP AG for a complete reconditioning and electronic calibration, to be performed on the DUAP test benches. Successful on site commissioning with excellent performance has been accomplished, by having a satisfied- and new DUAP customer, with remarkable cost saving benefits.
